

HTML: I believe I deserve a 46/50 for this section as I have completed all of the requirements with minimal error.

- The code runs without error: 6 points
- Document Structure: 10 points
- HTML5 semantic elements: 10 points
- Validations: 20 / 24 points because I was unsure what the rubric referred to in terms of validations.

Basic CSS: I believe I deserve a 30/30 for this section as I have completed all parts of it

- Elements styled with CSS accurately: 10 points
- Includes styling: 10 points (made use of color, font, and margin)
- There are no errors in the css and it formatted cleanly
- NO errors or syntax mistakes: 5 points
- Proper formatting and clean look: 5 points

More CSS: I believe I deserve a 10/10 for this section as I have completed all parts of it

- Includes at least one advance CSS element: 5 points (made use of both flex and grid)
- Appropriate use and proper syntax: 5 points (made use of inline where appropriate)

Role Based: I believe deserve a 10/10 for this section as I believe I completed all aspects of the requirement

- Submitted the screenshots of screens with description of use: 6 pts
- Elements used in HTML and CSS satisfy role specifications: 2 pts
- Complexity and functionality required for profile displayed accurately: 2 pts

Overall I think I completed the project adequately . The only thing I might get points taken off for is my html and css not being consistent with my group mates. This was because I didn't have time to communicate with them this week due to a midterm for another class. Regardless I completed the UI according to the front end ui I submitted in part 1.
